DETAILED ACTION

Information Disclosure Statement

1. Applicant's Information Disclosure Statements submitted on 9/9/04 and 10/24/05 have been fully considered as indicated by the signed PTO-1449s attached hereto.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 2 is rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 4,688,026 (hereinafter "Scribner").

Scribner discloses a method of surveying equipment assets comprising loading equipment data into a server (see step 212) or collection device (108; see column 6, lines 35-40) and operating the collection device (mobile device; 108) to survey equipment assets located at the site and create a site equipment database.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 3627

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Scribner in view of U.S. Patent No. 6,298,333 (hereinafter “Manzi”).

Scribner discloses a system for collecting information relating to equipment located at a cite as set forth above in section 3. It is noted that Scribner identifies the equipment (for example, see Figure 3, “1982 Drexel Couch”).

Scribner fails to explicitly disclose the specified data includes a set of equipment categories and a set of attributes relating to each category.

Manzi teaches the use of recording for each item of equipment comprising an equipment category (see Abstract).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Scribner with equipment categories as taught by Manzi, because recording equipment category information allows the organization to better track equipment for accounting purposes (depreciation and taxes).

6. Claims 3-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Scribner in view of U.S. Patent No. 6,154,738 (hereinafter “Call”).

Scribner discloses all claimed elements as set forth above in section 3, but fails to explicitly disclose communicating equipment data to a central server via XML.

Call teaches the use of communicating inventory data to a central server (see Figure 8, “Shared Product Info Server 840”) via XML (see Abstract).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Scribner with a central server as taught by Call, because communicating data to a central server provides organized data storage and efficient

access from multiple locations and further maintaining data consistency by using a single primary storage location.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to Applicant's disclosure.

Gray et al., Brown et al., Conway, Black, and Fuchs et al. are cited of interest for disclosing equipment inventory tracking systems.

Capazario et al. is cited of interest for disclosing an image recognition inventory management system for updating inventory data with a mobile device.

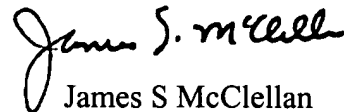

Jaeger et al. is cited of interest for disclosing a method for classifying equipment in an asset management database.
